External fixation device, which encourages healing in a fracture or joint injury, is adjusted or revised.

An external fixation device is removed under general anesthesia.

A tendon graft is obtained from a donor site.

An allograft is used during a separately reportable surgery.

Bone graft from any donor area

Code 20900 for a minor or small graft; code 20902 for a large or major graft

Fascia lata graft

By stripper (20920); by incision and area exposure, complex or sheet (20922)

Removal, under anesthesia, of external fixation system

An external fixation device is removed under general anesthesia.

Tendon graft

A tendon graft is obtained from a donor site.

Allograft for spinal surgery

Crushed bone or growth inducing material is used (29030)

Custom shaped donor bone is used (29031)

An allograft is used during a separately reportable surgery.
Removal of transvenous pacemaker electrode(s)

Transvenous electrode wire(s) are disconnected from the pacemaker generator and removed; for atrial or ventricular (33234), or for both (33235).

Removal of single or dual chamber pacing cardioverter-defibrillator electrode

The automatic cardioverter-defibrillator electrode wires are removed after disconnecting the wires from the generator. For thoracotomy (33243), or by transvenous extraction (33244).

Removal of permanent transvenous electrode(s) by thoracotomy

One or more permanent transvenous electrodes are removed by thoracotomy after an unsuccessful transvenous extraction attempt.

Insertion/replacement of permanent pacing cardioverter-defibrillator system

Both generator and lead components of a cardioverter-defibrillator are placed.

Cardioverter-defibrillator pulse generator insertion or removal

An AICD or ICD generator component is placed in a pocket under the skin (33240) or removed without replacement (33241).

Extensive operative tissue ablation and reconstruction of atria

A maze procedure is performed without (33255), or with (33256) cardiopulmonary bypass.
